PROJECTS

Character Recognition for Tamil Characters

- Developed an AI-powered web application using Python (TensorFlow/Keras, FastAPI) for the decipherment and translation of ancient 8th-century Tamil Vatteluthu inscriptions.

Natural Language To SQL

- Modular NL-to-SQL bot developed and deployed an intent-based chat application that translates natural language queries (e.g., "games by Sony") into executable SQL against a relational game dataset, reducing data access friction. Key technologies include FastAPI, Streamlit, and Scikit-learn.

Multi-Modal MRV Framework

- Architected a hybrid Soil Organic Carbon (SOC) estimation framework fusing Sentinel-2 Multi-Spectral data, IoT ground telemetry (ESP32) and real-time atmospheric VPD. **Applied For Patent**

CORE COMPETENCIES

- Programming Languages: Python, C, Java, SQL, HTML, JavaScript
- Frameworks & Tools: FastAPI, Streamlit, Scikit-learn, Unity Engine, Bootstrap 5, Git

LANGUAGES

- Tamil
- English
- German (A1)

EDUCATION

Vel Tech Rangarajan Dr. Sagunthala R&D Institute of Science and Technology | 2023–Present
Bachelor of Technology in Computer Science and Engineering (Data Science)

- CGPA: 8.84

Everwin Vidhyashram Kolathur
Higher Secondary | 2023

- 77.8%

Secondary Education | 2021

- 65.8%

CERTIFICATES

Web Development | 2023
Corizo

Data Science | 2025
EdiGlobe

INTERNSHIP

Data Science | 2025

During my 2-month data analyst internship at Ediglobe, I successfully contributed to solving complex real-world problems by leveraging data insights to drive tangible business value. My work involved developing sophisticated analytical solutions that directly addressed strategic company goals, significantly enhancing operational effectiveness and informing critical business decisions.
